

VedaVMS Maintainer Cookbook

A quick recipe for maintainers who upload PDF documents and update the Google Sheet.

🔗 **Note:** This cookbook covers the everyday workflow. For the complete system architecture, one-time setup, or server credentials, see [MAINTAINER_GUIDE.md](#).

🔗 The 3-Step Recipe

Step 1: Upload PDF in Plesk → Step 2: Copy Link from Browser → Step 3: Paste in Google Sheet

Step 1: Upload the PDF File

1. Log into **Plesk** (<https://103.69.196.157:8443>).
2. Go to **Websites & Domains** → **vedavms.in** → **File Manager**.
3. Open **httpdocs** → **docs** → open the relevant folder (e.g. **TU**, **sanskrit**, **Shiva-Stuti**, etc.).
4. Click the blue + **(Upload)** button and select your PDF file.

Step 2: Get the Link (Zero Typing)

1. Find your uploaded PDF in the list.
2. Click the three-dots menu **...** on the right side of the row.
3. Click **"Open in Browser"**.
4. The PDF opens in a new browser tab.
5. **Click the browser's address bar and copy the URL (Ctrl + C).**

(Example copied link: https://vedavms.in/docs/sanskrit/JSV_Samhita.pdf)

Step 3: Add to Google Sheets

Open the [VedaVMS Google Sheet](#) and add a row:

Column	What to enter	Example
Supersection	Language name	Sanskrit
Section	Category heading	Vedic Books by Subject
Title	Clean name of the document	JSV Samhita - Sanskrit
PDF_URL	Paste the URL from Step 2	https://vedavms.in/docs/sanskrit/JSV_Samhita.pdf

Column	What to enter	Example
Version	Edition / Version number	V1.0
Date	Release date	Sep 7, 2026
Corrections_URL	(Optional) Errata PDF link	(leave blank if none)
Status	Set to Active	Active

Updating an Existing Document

If you are publishing a new edition or adding an errata/corrections PDF:

1. Upload the new file to Plesk and copy its URL (Steps 1 & 2 above).
2. In Google Sheets, find the existing row for that document:
 - Update **PDF_URL** with the new link.
 - Update **Version** (e.g. change V1.0 → V1.1) and **Date**.
 - If there is an errata sheet, paste its link into **Corrections_URL**.

Quick Rules for Maintainers

1. Document Numbering is 100% Automatic!

- You **do not** need to type 1), 2), 3) in the title. The website automatically numbers all main books in order.
- If your document is a **sub-book** belonging to the book above it, simply prefix it with **A), B)**, etc. (e.g., **A) Surya Namaskaram** automatically displays as **1A) Surya Namaskaram**).

2. How to Temporarily Remove a Document

- **Never delete the row.** Simply change **Status** from **Active** to **Hidden**.
- The website will automatically hide it and renumber the remaining books seamlessly starting from 1).

3. When Do Changes Go Live?

- **Immediately from the Google Sheet:** Click  **VedaVMS → Publish to Staging (new.vedavms.in)** in the top menu of the sheet. Changes will be live in 1–2 minutes!
- Or via GitHub Actions (**Run workflow**) or from an admin's laptop (**python scripts/sync_staging.py**).
